

Business Requirement Document

Project Title

E-Commerce Order Management Database System

1. Business Objective

The objective is to build a centralized database system that manages customers, products, suppliers, inventory, orders, payments, shipments, and reviews efficiently.

2. Business Goals

- Improve order processing
- Reduce manual work
- Improve inventory tracking
- Store accurate customer information
- Generate business reports
- Improve customer satisfaction

3. Business Requirements

- Customer Management
 - Register customers
 - Store customer information
 - Maintain customer history
- Product Management
 - Add products
 - Update products
 - Delete products
 - View products
- Category Management
 - Maintain product categories
- Supplier Management
 - Store supplier information
- Inventory Management
 - Update stock quantity
 - Monitor available stock
- Order Management
 - Create orders
 - Store order details
 - Update order status
- Payment Management
 - Record payments
 - Update payment status
- Shipment Management
 - Track delivery
 - Update shipment status
- Review Management
 - Customers submit ratings

- Customers submit comments

4. Business Benefits

- Centralized database
- Faster order processing
- Better inventory management
- Improved customer service
- Accurate reports
- Reduced data redundancy

5. Success Criteria

- The system should:
- Store data accurately
- Process orders successfully
- Track inventory correctly
- Generate reports
- Provide secure access
- Maintain data consistency

6. Deliverables

- Requirement Analysis Report
- SRS Document
- ER Diagram
- Database Design
- SQL Tables
- SQL Queries
- Reports

7. Conclusion

The proposed system will improve operational efficiency by providing a reliable and centralized database solution for e-commerce operations.
